Engineering Leader | DevOps & DevSecOps at Scale | Developer Productivity, CI/CD, Continuous Observability & Security — Regulated & Payments

SUMMARY

DevOps and DevSecOps engineering leader with 15+ years leading teams that build and operate scalable, secure, fault-tolerant distributed systems. I lead developer-productivity initiatives across automation, CI/CD, and continuous observability; champion application and infrastructure security with a security-first, DevSecOps approach (code analysis, SBOM, encrypted secrets); and hold production and lower environments to high-availability standards at 99.99% uptime with SLOs and blameless incident response. I've done this in regulated, high-stakes domains — fintech payments (Prosper), FDA-regulated medical devices (Insulet), and one of AWS's largest distributed data services (Redshift) — coaching, mentoring, and managing engineers while partnering with stakeholders on solutions and best practices. Hands-on in Java and Python.

EXPERIENCE

CruxOCM Inc. — VP of Engineering / Head of Automation (reporting to the CTO) · Feb 2025 – Present

- **Leadership, team & best practices:** Lead a distributed engineering org across DevOps, platform, infrastructure, security, and quality; coach, mentor, and manage engineers and leads, nurture talent, and partner with stakeholders on solutions — driving engineering best practices that raise reliability and quality.
- **Developer productivity — automation, CI/CD & continuous observability:** Lead developer-productivity initiatives across CI/CD (GitHub Actions, Jenkins, Bazel monorepo, Gradle) with pipeline gating and release governance, automation frameworks and self-service environments, and continuous observability (Grafana LGTM — metrics, logs, traces — / OpenObserve with PagerDuty); measured as DORA metrics with dashboards from engineer to executive.
- **Scalable, fault-tolerant distributed systems (DevSecOps):** Standardized Kubernetes as the control plane across GCP and Azure — multi-tenant, GitOps-governed clusters with Terraform IaC — designing scalable, fault-tolerant components with DevSecOps principles and holding production and lower environments to 99.99% uptime with SLOs and blameless incident/RCA.
- **Application & infrastructure security:** Champion security-first delivery — static-analysis code scanning, SBOM generation, encrypted secrets, and access-control standards — and spearheaded ISO 27001 and SOC 2 programs (audit ownership) for a safety-critical, regulated environment.
- **AI-driven automation:** Built automation that eliminated manual ops toil, including production AI agents on GCP ADK (miniBOT, a Gemini multi-agent assistant) and reusable MCP servers, plus standardized Cursor/Claude Code + GitHub Copilot for automated PR review.
- **Budget & cross-functional:** Own ~$2M cloud spend with >$200K saved; partner with the CEO/CTO and across security, product, and operations on roadmap and quarterly OKRs.

Insulet Corporation (FDA-regulated medical devices) — Sr. Cloud Engineering Manager · Dec 2022 – Feb 2025

- Led cloud and data-product teams (25–30 engineers) across DevOps, developer productivity, and performance engineering; partnered with the VP of Engineering on multi-year roadmaps and quarterly OKRs.
- Owned end-to-end CI/CD with gating and one-button deploy (Jenkins, Python, Gradle); operated highly available Jenkins on EKS/EFS (99.9% uptime) and cut deployment errors 15%.
- Built a performance and load-testing framework (Locust, Python) on EKS/AWS (25% improvement); implemented SBOM generation and regulated change control for data integrity and supply-chain security.

Amazon (AWS Redshift) — Lead Systems Engineer · Dec 2016 – Dec 2022

- Owned the build, CI/CD, release ecosystem, and test tooling for Redshift — one of AWS's largest-scale distributed data services — including the CI/CD servers and fully automated build/deploy across all AWS-supported regions.
- Led the team that designed and shipped a Bors-style automated merge queue, gating integration on the exact merge candidate (not just the feature branch) — eliminating broken-mainline incidents and unblocking developer velocity org-wide.

- Added metrics-driven reporting on pipeline health and developer productivity, making bottlenecks visible and driving continuous improvement across the developer workflow.

Prosper Marketplace (regulated fintech / payments) — Lead DevOps Engineer · Jan 2015 – Dec 2016

- Rolled out org-wide CI/CD with Jenkins and containerization with Docker for a regulated consumer-lending platform; managed Artifactory artifact/versioning, SonarQube static-analysis quality gates, and a Hadoop cluster on AWS (EMR).

Pivotal Software — Member of Technical Staff · Sep 2011 – Jan 2015

- Managed CI infrastructure and agents; migrated Perforce to Git with enforced branching/merge policy; automated Coverity static analysis and code-coverage; built dynamic provisioning of Linux environments on AWS and vCloud.

OPEN SOURCE

UniClaw · github.com/uniclaw-labs/uniclaw

- Architected and shipped UniClaw, an open-source AI agent platform — a multi-provider framework on a FastAPI (Python) backend and a React / TypeScript app, with a security-first design: OAuth2 authorization server with scoped JWTs, rate limiting, Fernet-encrypted secrets, and non-root containers; 4,400+ automated tests across a polyglot codebase (Python, TypeScript, Rust) with Dockerized orchestration. Also publish an open-source Lever MCP server.

EDUCATION

- M.S., Software Engineering, San Jose State University (2011)
- B.E., Computer Engineering, Gujarat University (2009)

SKILLS & TOOLS

- **DevOps & DevSecOps:** CI/CD (Jenkins, GitHub Actions, Bazel monorepo, Gradle); Docker; Git; automation frameworks; merge-queue & release governance; security-first delivery; code analysis (SonarQube) & SBOM
- **Developer Productivity & Observability:** DORA metrics & dashboards; continuous observability (Grafana / Grafana LGTM, OpenObserve, PagerDuty); SLOs; self-service environments; developer-productivity leadership
- **Platform & Cloud:** Kubernetes (EKS, GKE, AKS); public & private / hybrid cloud (AWS, GCP, Azure); Terraform; GitOps; scalable, fault-tolerant distributed systems; high availability & reliability (99.99%)
- **Security & Compliance:** DevSecOps; application & infrastructure security; static-analysis scanning; encrypted secrets & access control; ISO 27001 / SOC 2 (audit ownership)
- **AI & Automation:** AI agents (GCP ADK) & MCP servers; enterprise AI rollout (Gemini Enterprise); AI-assisted development (Cursor, Claude Code, GitHub Copilot)
- **Leadership:** Coaching, mentoring & managing engineers; people management & talent development; stakeholder partnership; roadmaps & OKRs; ~$2–3M budget & vendor management
- **Languages & Data:** Java; Python; Bash; C/C#; SQL/NoSQL (MySQL, PostgreSQL, Oracle, DynamoDB); API design
