Engineering Leader | GenAI & Cloud Strategy at Scale | Agentic AI Across the SDLC, DevSecOps & Regulated-Industry Security

SUMMARY

Engineering leader with 15+ years setting enterprise engineering and cloud strategy and building the AI platforms that run on it. I drive the adoption of generative and agentic AI across the software development lifecycle — an org-wide Gemini Enterprise rollout, standardized Cursor/Claude Code with automated PR review, and production multi-agent systems grounded by RAG over vector embeddings on Vertex AI. I lead cloud-first platforms across AWS, GCP, and Azure with a security-first, DevSecOps architecture at 99.99% availability, and I have a track record of improving engineering productivity (DORA metrics, automated merge gating) and system reliability in safety-critical, regulated environments (energy, FDA-regulated medical devices, fintech). I partner with product, security, and governance, communicate technical vision to executives, and build and mentor high-performing teams. Hands-on in Java, Python, and React.

EXPERIENCE

CruxOCM Inc. — VP of Engineering / Head of Automation (reporting to the CTO) · Feb 2025 – Present

- **Engineering & cloud strategy:** Set enterprise engineering and cloud strategy aligned to business goals for an industrial automation platform in safety-critical energy environments; lead a distributed org across AI, platform, infrastructure, DevOps, security, and quality; partner with the CEO/CTO and with product, security, and governance, and communicate technical vision to executives.
- **Generative & agentic AI across the SDLC:** Drove org-wide adoption of generative and agentic AI — a Gemini Enterprise rollout, standardized Cursor/Claude Code + GitHub Copilot for automated PR review, and production AI agents on GCP ADK (miniBOT, a Gemini multi-agent assistant; TestBOT, which auto-generates tests) plus reusable MCP servers — embedding AI across the development lifecycle.
- **GenAI, LLMs, RAG & vector databases:** Architected miniBOT's retrieval layer — RAG over BigQuery vector embeddings on Vertex AI — grounding LLM agents in operational documentation and tickets; designed multi-agent orchestration and prompt/skill lifecycle practices.
- **Cloud-first platform (AWS/GCP/Azure), security & availability:** Standardized Kubernetes across GCP and Azure with GitOps governance and Terraform, cloud-native and DevSecOps by design; 99.99% availability with SLOs and blameless incident/RCA; own ~$2M cloud spend with >$200K saved.
- **Engineering productivity & reliability:** Improved engineering productivity as DORA metrics with dashboards from engineer to executive; automated merge gating and release governance; static-analysis code scanning and SBOM across CI/CD.
- **Security in regulated environments & compliance:** Security-focused architecture — access control, encrypted secrets, supply-chain scanning — and spearheaded ISO 27001 and SOC 2 programs (audit ownership) for a regulated, safety-critical platform.

Insulet Corporation (FDA-regulated medical devices) — Sr. Cloud Engineering Manager · Dec 2022 – Feb 2025

- Led cloud and data-product teams (25–30 engineers) across DevOps, developer productivity, and performance engineering; partnered with the VP of Engineering on multi-year roadmaps and quarterly OKRs.
- Built a performance and load-testing framework (Locust, Python) on EKS/AWS (25% improvement); operated highly available Jenkins on EKS/EFS (99.9% uptime) and cut deployment errors 15%.
- Owned end-to-end CI/CD with gating and one-button deploy (Jenkins, Python, Gradle); implemented SBOM generation and regulated change control for data integrity and supply-chain security.

Amazon (AWS Redshift) — Lead Systems Engineer · Dec 2016 – Dec 2022

- Owned the build, CI/CD, release ecosystem, and test tooling for Redshift — one of AWS's largest-scale distributed data services — including the CI/CD servers and fully automated build/deploy across all AWS-supported regions.
- Led the team that designed and shipped a Bors-style automated merge queue, gating integration on the exact merge candidate (not just the feature branch) — eliminating broken-mainline incidents and unblocking developer velocity org-wide.

- Added metrics-driven reporting on pipeline health and developer productivity, making bottlenecks visible and driving continuous improvement across the developer workflow.

Prosper Marketplace (regulated fintech / payments) — Lead DevOps Engineer · Jan 2015 – Dec 2016

- Rolled out org-wide CI/CD with Jenkins and containerization with Docker for a regulated consumer-lending platform; managed Artifactory artifact/versioning, SonarQube static-analysis quality gates, and a Hadoop cluster on AWS (EMR).

Pivotal Software — Member of Technical Staff · Sep 2011 – Jan 2015

- Managed CI infrastructure and agents; migrated Perforce to Git with enforced branching/merge policy; automated Coverity static analysis and code-coverage; built dynamic provisioning of Linux environments on AWS and vCloud.

OPEN SOURCE

UniClaw · github.com/uniclaw-labs/uniclaw

- Architected and shipped UniClaw, an open-source multi-model AI agent platform — Claude-powered agents on a FastAPI (Python) backend and a React / TypeScript app, with multi-model routing and a security-first design (OAuth2 authorization server with scoped JWTs, rate limiting, Fernet-encrypted secrets, non-root containers); 4,400+ automated tests across a polyglot codebase (Python, TypeScript, Rust). Also publish an open-source Lever MCP server.

EDUCATION

- M.S., Software Engineering, San Jose State University (2011)
- B.E., Computer Engineering, Gujarat University (2009)

SKILLS & TOOLS

- **GenAI & Agentic AI:** Generative & agentic AI across the SDLC; LLMs; RAG / retrieval; vector databases & embeddings (Vertex AI, BigQuery); multi-agent orchestration; MCP servers; enterprise AI rollout (Gemini Enterprise); AI-assisted development (Cursor, Claude Code, GitHub Copilot)
- **Cloud & Platform:** Cloud-first / cloud-native on AWS, GCP, Azure; Kubernetes (EKS/GKE/AKS); Terraform; Docker; GitOps; distributed systems at scale; high availability (99.99%)
- **DevSecOps & Security:** DevSecOps architecture; static-analysis code scanning; SBOM & supply-chain security; encrypted secrets & access control; ISO 27001 / SOC 2 (audit ownership); security-focused design in regulated environments
- **Engineering Productivity & Reliability:** DORA metrics & dashboards; CI/CD (GitHub Actions, Jenkins, Bazel monorepo, Gradle); automated merge gating & release governance; observability (Grafana LGTM / OpenObserve, PagerDuty); SLOs & incident/RCA
- **Leadership & Strategy:** Enterprise engineering & cloud strategy; building & mentoring high-performing teams; product/security/governance partnership; executive communication; roadmaps & OKRs; ~$2–3M budget & vendor management
- **Languages & Data:** Java; Python; React / TypeScript; Bash; C/C#; SQL/NoSQL (MySQL, PostgreSQL, Oracle, DynamoDB); API design
