Engineering Leader | Platform & Cloud Infrastructure at Scale | Kubernetes, Distributed Systems, Reliability & Team Leadership

SUMMARY

Platform and cloud-infrastructure leader with 15+ years managing production systems and the teams that run them. I set technical strategy across compute, databases, storage, and networking; run Kubernetes and Docker across AWS, GCP, and Azure; and operate large-scale distributed systems for high-volume processing — including one of AWS's largest distributed data services and automated build/deploy control planes across every region. I scale platforms for reliability and cost while keeping them fast to iterate on, hire and mentor high-performing engineers, and partner cross-functionally with product and operations. Deep regulated-industry and fintech background (Prosper; ISO 27001, SOC 2), with a systems-thinking, product-minded approach to infrastructure.

EXPERIENCE

CruxOCM Inc. — VP of Engineering / Head of Automation (reporting to the CTO) · Feb 2025 – Present

- **Infrastructure team & technical strategy:** Lead a distributed engineering organization across platform, infrastructure, DevOps, security, and quality; own technical strategy for compute, databases, storage, and networking; hire, mentor, and grow engineers and leads in a high-performance culture.
- **Cloud infrastructure & Kubernetes at scale:** Standardized Kubernetes as the control plane across GCP and Azure — multi-tenant, GitOps-governed clusters with Docker and Terraform — running distributed systems with a systems-thinking, product-minded approach to reliability and scale.
- **Control planes & high-volume execution:** Built control planes and automation for high-volume execution — self-service ephemeral infrastructure, CI/CD pipelines, and an AI control plane (Agent Gateway on GKE with a Kuma service mesh) — enabling rapid innovation without sacrificing reliability.
- **Reliability, observability & scalability:** Run reliability with observability (Grafana LGTM / OpenObserve, PagerDuty), SLOs, and blameless incident response/RCA at 99.99% uptime; own ~$2M cloud spend with >$200K saved through right-sizing and scaling.
- **Security & cross-functional partnership:** Partner cross-functionally with product and operations while maintaining security — ISO 27001 and SOC 2 (audit ownership), SBOM, and static-analysis scanning for a safety-critical, regulated platform.

Amazon (AWS Redshift) — Lead Systems Engineer · Dec 2016 – Dec 2022

- Owned the build, CI/CD, release ecosystem, and test tooling for Redshift — one of AWS's largest-scale distributed data services — including the CI/CD servers and fully automated build/deploy control planes across all AWS-supported regions, at high volume.
- Led the team that designed and shipped a Bors-style automated merge queue, gating integration on the exact merge candidate (not just the feature branch) — eliminating broken-mainline incidents and unblocking developer velocity org-wide.
- Added metrics-driven reporting on pipeline health and developer productivity, making bottlenecks visible and driving continuous improvement across the developer workflow.

Insulet Corporation (FDA-regulated medical devices) — Sr. Cloud Engineering Manager · Dec 2022 – Feb 2025

- Led cloud and data-product teams (25–30 engineers) across platform, DevOps, developer productivity, and performance engineering; partnered with the VP of Engineering on multi-year roadmaps and quarterly OKRs.
- Built a performance and load-testing framework (Locust, Python) on EKS/AWS (25% improvement); operated highly available Jenkins on EKS/EFS (99.9% uptime) and cut deployment errors 15%.
- Owned end-to-end CI/CD with gating and one-button deploy (Jenkins, Python, Gradle); implemented SBOM generation and regulated change control for supply-chain security.

Prosper Marketplace (regulated fintech) — Lead DevOps Engineer · Jan 2015 – Dec 2016

- Rolled out org-wide CI/CD with Jenkins and containerization with Docker for a regulated consumer-lending platform; managed Artifactory artifact/versioning, SonarQube static-analysis quality gates, and a Hadoop cluster on AWS (EMR) for high-volume data processing.

Pivotal Software — Member of Technical Staff · Sep 2011 – Jan 2015

- Managed CI infrastructure and agents; migrated Perforce to Git with enforced branching/merge policy; automated Coverity static analysis and code-coverage; built dynamic provisioning of Linux environments on AWS and vCloud.

OPEN SOURCE

UniClaw · github.com/uniclaw-labs/uniclaw

- Architected and shipped UniClaw, an open-source AI agent platform — a multi-provider framework on a FastAPI (Python) backend and a React / TypeScript app, with a security-first design (OAuth2 with scoped JWTs, Fernet-encrypted secrets, non-root containers) and 4,400+ automated tests across a polyglot codebase (Python, TypeScript, Rust) with Dockerized orchestration. Also publish an open-source Lever MCP server.

EDUCATION

- M.S., Software Engineering, San Jose State University (2011)
- B.E., Computer Engineering, Gujarat University (2009)

SKILLS & TOOLS

- **Platform & Cloud Infrastructure:** Cloud providers (AWS, GCP, Azure); Kubernetes (EKS, GKE, AKS); Docker; Terraform; GitOps; compute, storage & networking; multi-tenant clusters
- **Distributed Systems & Data:** Large-scale distributed systems for high-volume processing; batch/background job execution & control planes; data platforms (AWS Redshift, BigQuery, Hadoop); databases (PostgreSQL, MySQL, Oracle, DynamoDB)
- **Reliability & Operations:** Observability (Grafana LGTM / OpenObserve, PagerDuty); SLOs; incident management & blameless RCA; 99.99% reliability; scalability & cloud cost optimization
- **Delivery & Security:** CI/CD (GitHub Actions, Jenkins, Bazel monorepo, Gradle); release governance; ISO 27001 / SOC 2 (audit ownership); SBOM & static-analysis scanning
- **AI & Automation:** AI control plane (Agent Gateway, LangGraph supervisor, MCP) on GKE/Kuma; AI agents (GCP ADK) & MCP servers; AI-assisted development (Cursor, Claude Code, GitHub Copilot)
- **Leadership:** Managing & mentoring high-performing infrastructure teams; technical strategy; systems thinking & product mindset; cross-functional partnership (product, operations); roadmaps & OKRs
- **Languages & Data:** Python; Java/C/C#; Bash; SQL/NoSQL; API design
