**Engineering Leader | Infrastructure & Platform Orgs at Scale | Large-Scale Distributed Systems, Reliability & Cost Efficiency**

## SUMMARY

Engineering leader with 15+ years building and scaling infrastructure and platform organizations around large-scale, mission-critical distributed systems. Owned the build, release, and platform tooling for AWS Redshift — one of AWS's largest-scale distributed data services, running across every AWS region — and today lead a distributed, cross-functional engineering org (platform, infrastructure, DevOps, data, security, and quality) at a high-growth startup. Set platform and infrastructure strategy for scalability, reliability, performance, and cost efficiency; run multi-region, multi-cloud Kubernetes at 99.99% with SLOs and blameless incident/RCA; and turn emerging technology — especially AI — into actionable engineering strategy (enterprise LLM rollout, production agents, MCP servers, AI-assisted development). Hands-on in Java and Python, active in open source, and a partner to Product, Security, Finance, and the C-suite on roadmaps, hiring, and budgets. Build, mentor, and retain high-performing engineers and leaders.

## EXPERIENCE

**CruxOCM Inc. — VP of Engineering / Head of Automation (reporting to the CTO) · Feb 2025 – Present**

- **Org & strategy:** Lead a distributed, cross-functional engineering organization — platform, infrastructure, DevOps, data, AI, security, and quality — for an industrial automation platform in safety-critical energy environments; own platform/infrastructure strategy (scalability, reliability, performance, cost) and partner with the CEO, CTO, product, and security on the roadmap, OKRs, hiring, and workforce planning.
- **Platform & internal developer tooling:** Architected a web-services platform from scratch and standardized Kubernetes as the control plane across GCP and Azure with GitOps-style governance and Terraform; shipped self-service ephemeral environments and internal tooling that let engineers ship, scale, and operate safely and cost-efficiently.
- **Reliability, performance & cost:** Run reliability with observability (Grafana LGTM — Prometheus-compatible metrics via Mimir, plus Loki/Tempo — / OpenObserve, PagerDuty), SLOs, and blameless incident management/RCA at 99.99% uptime; own ~$2M cloud spend with >$200K saved through right-sizing and ephemeral infrastructure.
- **Emerging tech → AI strategy:** Defined and executed the org's enterprise AI strategy — an org-wide Gemini Enterprise rollout, standardized Cursor/Claude Code + GitHub Copilot PR review, and production AI agents on GCP ADK (miniBOT, a Gemini multi-agent troubleshooting assistant grounded by RAG) plus MCP servers for AI-powered infrastructure automation and cost governance.
- **Execution & quality:** Drive execution excellence — CI/CD across GitHub Actions, Jenkins, Bazel (monorepo), and Gradle with pipeline gating and release governance; DORA/PR metrics with dashboards from engineer to executive; SBOM and static-analysis security scanning; ISO 27001 and SOC 2 (audit ownership).
- **People & culture:** Hire, mentor, and grow engineers and leads across a distributed team; set technical standards and raise the bar through code review, coaching, and continuous improvement.

**Insulet Corporation (FDA-regulated medical devices) — Sr. Cloud Engineering Manager · Dec 2022 – Feb 2025**

- Led cloud and data-product teams (25–30 engineers) across platform, DevOps, developer productivity, and performance engineering; partnered with the VP of Engineering on multi-year roadmaps and quarterly OKRs.
- Built a performance and load-testing framework (Locust, Python) on EKS/AWS that improved cloud architecture performance 25%; operated highly available Jenkins on EKS/EFS (99.9% uptime) and cut deployment errors 15%.
- Owned end-to-end CI/CD with gating and one-button deploy (Jenkins, Python, Gradle); implemented SBOM generation and regulated change control for data integrity and supply-chain security.

**Amazon (AWS Redshift) — Lead Systems Engineer · Dec 2016 – Dec 2022**

- Owned the build, CI/CD, release ecosystem, and test tooling for Redshift — one of AWS's largest-scale distributed data services — including the CI/CD servers and fully automated build/deploy across all AWS-supported regions.
- Led the team that designed and shipped a Bors-style automated merge queue, gating integration on the exact merge candidate (not just the feature branch) — eliminating broken-mainline incidents and unblocking developer velocity org-

wide.

- Added metrics-driven reporting on pipeline health and developer productivity, making bottlenecks visible and driving continuous improvement across the developer workflow.

**Prosper Marketplace (regulated fintech) — Lead DevOps Engineer · Jan 2015 – Dec 2016**

- Rolled out org-wide CI/CD with Jenkins and containerization with Docker; managed Artifactory artifact/versioning, SonarQube quality gates, and a Hadoop cluster on AWS (EMR) for data processing.

**Pivotal Software — Member of Technical Staff · Sep 2011 – Jan 2015**

- Managed CI infrastructure and agents; migrated Perforce to Git with enforced branching/merge policy; automated Coverity static analysis and code-coverage; built dynamic provisioning of Linux environments on AWS and vCloud.

## OPEN SOURCE

**UniClaw · github.com/uniclaw-labs/uniclaw**

- Architected and shipped UniClaw, an open-source AI agent platform for connected vehicle control — a multi-provider framework supporting 27+ vehicle brands via 12 messaging channels and voice assistants, built on Claude-powered agents, a FastAPI (Python) backend, and a Tauri desktop app in React and TypeScript.
- Designed a security-first architecture: OAuth2 authorization server with scoped JWTs, rate limiting, Fernet-encrypted secrets, and non-root containers; 4,400+ automated tests across a polyglot codebase (Python, TypeScript, Rust) with Dockerized orchestration. Also publish an open-source Lever MCP server.

## EDUCATION

- M.S., Software Engineering, San Jose State University (2011)
- B.E., Computer Engineering, Gujarat University (2009)

## SKILLS & TOOLS

- **Distributed Systems & Platform:** Large-scale distributed systems (AWS Redshift); data platforms & warehousing; internal developer platforms & self-service infrastructure; API design; performance & reliability at scale
- **Cloud & Infrastructure:** AWS, GCP, Azure; multi-region & multi-cloud; Kubernetes (EKS, GKE, AKS); Terraform; Docker; GitOps
- **Reliability & Operations:** Observability (Grafana LGTM / Mimir / OpenObserve, PagerDuty); SLOs & incident management / blameless RCA; 99.99% reliability; cost efficiency & cloud FinOps; DORA metrics
- **AI & Emerging Tech:** Enterprise AI strategy (Gemini Enterprise); AI agents (GCP ADK) & MCP servers; RAG / retrieval; AI-assisted development (Cursor, Claude Code, GitHub Copilot); MLOps/LLMOps
- **Delivery & Security:** CI/CD (GitHub Actions, Jenkins, Bazel monorepo, Gradle); merge-queue & release governance; SBOM & static-analysis security; ISO 27001 / SOC 2 (audit ownership)
- **Leadership:** Scaling & mentoring distributed engineering teams and leaders; hiring & workforce planning; roadmaps & OKRs; ~$2–3M budget & vendor management; C-suite & cross-functional partnership; open-source engagement
- **Software & Data:** Java; Python; Bash; C/C#; SQL/NoSQL (MySQL, PostgreSQL, Oracle, DynamoDB)
