Engineering Leader | Developer Infrastructure, CI/CD & Cloud Platforms | AI-Assisted Development & Agent Orchestration

SUMMARY

Engineering leader with 15+ years building developer infrastructure and platforms that multiply every engineer's output — CI/CD, build systems, cloud and containerized environments, and the AI-assisted workflows layered on top. I own the golden paths: standardized Cursor and Claude Code across the org, shipped MCP servers and GCP ADK agents for self-service infrastructure, and put agents to work authoring tests and triaging incidents. Deep distributed-systems and production-infra background — build/CI tooling for AWS Redshift at massive scale and Kubernetes control planes across GCP and Azure at 99.99% reliability, with observability and SLOs. Grow, coach, and scale technical teams across multiple charters (AI, platform, DevOps, infrastructure, quality), set long-term technical direction, and partner across the org — with a clear point of view on how coding agents change what developer infrastructure must do.

EXPERIENCE

CruxOCM Inc. (AI + industrial-automation startup) — Head of Automation (reporting to the CTO) · Feb 2025 – Present

- **AI-assisted developer workflows:** Standardized Cursor and Claude Code as the team development environment and deployed Claude Code + GitHub Copilot for automated PR review — making every engineer more effective and setting a working point of view on how coding agents reshape developer infrastructure.
- **Agent platform & orchestration:** Architected and shipped production agents on GCP ADK — a test-authoring agent that auto-generates test cases and a troubleshooting agent for incident resolution — plus MCP servers (a published open-source Lever MCP server and Slack-native servers) and multi-agent orchestration powering self-service infrastructure and automated cost governance.
- **Developer infrastructure & CI/CD:** Standardized Kubernetes as the control plane across GCP and Azure with GitOps-style governance and golden-path conventions; built the web-services platform and CI/CD pipelines from scratch; 99.99% uptime and >$200K saved on ~$2M cloud spend.
- **Observability & incident response:** Own platform observability on the Grafana LGTM stack (Loki/Grafana/Tempo/Mimir) and/or OpenObserve with PagerDuty — logs, metrics, traces, SLOs, and on-call/incident response.
- **Fast, trustworthy testing:** Built a Robot Framework test platform (integration/E2E/regression with pipeline gating) augmented by the in-house AI test-authoring agent — cutting manual regression from days to <12 hours while keeping pipelines fast and trustworthy.
- **Build-vs-buy & enterprise rollout:** Assessed and standardized the org's AI tooling and models (Cursor, Claude Code, GitHub Copilot, Gemini Enterprise) and drove org-wide Gemini Enterprise rollout across engineering, operations, and GTM.
- **Team across multiple charters:** Lead and grow a technical org across multiple charters — AI, platform, DevOps, infrastructure, security, and quality — hiring, coaching, and developing engineers' careers; set long-term technical direction and partner with the CEO/CTO and cross-functional teams on roadmap and quarterly OKRs.

Insulet Corporation — Sr. Cloud Engineering Manager · Dec 2022 – Feb 2025

- Managed cloud and data-product teams (25–30 engineers) across DevOps, **developer-productivity tooling**, and performance engineering — hiring, coaching, and growing the team through a high-growth phase.
- Owned end-to-end CI/CD (branching to one-button deploy) with Jenkins, Python, and Gradle; operated highly available Jenkins on EKS/EFS (99.9% uptime) and cut deployment errors 15%.
- Built a performance and load-testing framework (Locust, Python) on EKS/AWS driving a 25% improvement in cloud architecture performance.
- Automated SBOM generation and merge across ~25 microservices in CI/CD.

Amazon (AWS Redshift) — Lead Systems Engineer · Dec 2016 – Dec 2022

- Owned the build, CI/CD, release ecosystem, and test tooling for Redshift — one of AWS's largest-scale distributed data services — including the CI/CD servers and fully automated build/deploy across all AWS-supported regions.

- Led the team that designed and shipped a Bors-style automated merge queue, gating integration on the exact merge candidate (not just the feature branch) — eliminating broken-mainline incidents and unblocking developer velocity org-wide.
- Added metrics-driven reporting on pipeline health and developer productivity, making bottlenecks visible and driving continuous improvement across the developer workflow.

Prosper Marketplace — Lead DevOps Engineer · Jan 2015 – Dec 2016

- Rolled out org-wide CI/CD with Jenkins and containerization with Docker; managed Artifactory for microservice versioning and SonarQube for static analysis; ran a Hadoop cluster on AWS (EMR).

Pivotal Software — Member of Technical Staff · Sep 2011 – Jan 2015

- Managed CI infrastructure and agents; migrated Perforce to Git; automated Coverity and code-coverage integration; built dynamic provisioning of Linux development/test environments on AWS and vCloud.

OPEN SOURCE

UniClaw · github.com/uniclaw-labs/uniclaw

- Architected and shipped UniClaw, an open-source AI agent platform for connected vehicle control — a multi-provider framework supporting 27+ vehicle brands (Tesla, BMW, Ford, Rivian) with natural language commands via 12 messaging channels (WhatsApp, Telegram, Slack) and voice assistants (Alexa, Google Home), built on Claude-powered agents, FastAPI, and a Tauri/React desktop app.
- Designed a security-first architecture for sensitive vehicle credentials: an OAuth2 authorization server with scoped JWTs, automatic Fernet encryption of secrets, constant-time token validation, and non-root containers — patterns transferable to SOC 2 / ISO 27001 environments.
- Delivered production-grade quality across a polyglot codebase (Python, TypeScript, Rust): 4,400+ automated tests, pluggable provider/channel adapters, Dockerized multi-service orchestration, and three AI backends (Anthropic API, local Ollama, zero-cost command mode).

EDUCATION

- M.S., Software Engineering, San Jose State University (2011)
- B.E., Computer Engineering, Gujarat University (2009)

SKILLS & TOOLS

- **Developer Infrastructure & CI/CD:** CI/CD & build systems (GitHub Actions, Jenkins, Bazel, Gradle); GitOps & golden paths; self-service ephemeral infrastructure; container/VM orchestration (Kubernetes — GKE/EKS/AKS, Docker); test automation & pipeline gating (Robot Framework, Python); performance engineering (Locust); SBOM
- **AI-Assisted Development & Agents:** AI-augmented development (Cursor, Claude Code, GitHub Copilot); coding & background agents (GCP ADK); agent orchestration & agentic workflows; MCP servers & integrations (incl. published open-source MCP server); enterprise LLM rollout (Gemini Enterprise); build-vs-buy for AI tools & models
- **Distributed Systems & Cloud:** Distributed systems & large-scale data services; AWS, GCP, Azure; Terraform; observability (Grafana LGTM / OpenObserve, PagerDuty), SLOs & reliability (99.99%)
- **Leadership:** Managing & growing engineering teams across multiple charters; hiring, coaching & career development; technical direction & architecture; multi-year initiatives; cross-functional & cross-org alignment; roadmaps & quarterly OKRs
- **Software & Data:** Python; Java/C/C#; Shell; API design; MySQL, PostgreSQL, Oracle, DynamoDB
