Engineering Leader | Platform Reliability, SRE & Developer Enablement | AI-Native Ops, CI/CD & Cloud Infrastructure

SUMMARY

Platform-minded engineering leader with 15+ years treating infrastructure as a product that multiplies every engineer's output. Own cloud infrastructure at scale — AWS and Kubernetes/EKS across clouds, Terraform IaC — at 99.99% reliability, with observability (Grafana LGTM / OpenObserve, PagerDuty), SLO-driven operations, and incident command that drives down MTTR. Lead the shift to AI-native engineering: standardized Cursor and Claude Code with automated PR review, and shipped MCP servers and GCP ADK agents that safely automate self-service infrastructure — engineers as architects and auditors of AI-generated work. Run developer productivity as metrics (DORA, PR throughput) and own vendor strategy and cost optimization (>$200K saved on ~$2M spend). Hands-on in code, grounded in FDA-regulated healthcare and ISO 27001 / SOC 2, and experienced leading distributed teams through hiring, coaching, and blameless operational excellence.

EXPERIENCE

CruxOCM Inc. — Head of Automation (reporting to the CTO) · Feb 2025 – Present

- **Platform reliability & cloud infrastructure:** Standardized Kubernetes/EKS control planes across GCP and Azure with GitOps and Terraform IaC; own SLO-driven operations at 99.99% uptime, treating the platform as a product other teams adopt by default.
- **Observability & incident response:** Own platform observability on the Grafana LGTM stack (Loki/Grafana/Tempo/Mimir) and/or OpenObserve with PagerDuty — logs, metrics, traces, SLOs, on-call, and incident command to reduce MTTR.
- **AI-native engineering & infra agents:** Standardized Cursor and Claude Code with automated PR review, and shipped MCP servers + GCP ADK agents that automate self-service infrastructure and cost governance — advancing a model where engineers architect and audit AI-generated work, with governance and guardrails as the safety layer.
- **CI/CD & developer productivity:** Own CI/CD across GitHub Actions, Jenkins, Bazel (monorepo), and Gradle with pipeline gating and self-service ephemeral environments; run developer productivity as metrics (DORA, PR throughput).
- **Vendor strategy & cost optimization:** Own ~$2M cloud spend and vendor strategy across GCP and Azure; drove >$200K in savings through right-sizing and automation.
- **Team & operational excellence:** Lead and grow a distributed engineering org (including senior engineers) across platform, DevOps, infrastructure, security, and quality — hire, coach, run blameless retros, and partner across security, product, and operations; own ISO 27001 and SOC 2 in a safety-critical, regulated environment.

Insulet Corporation (FDA-regulated medical devices) — Sr. Cloud Engineering Manager · Dec 2022 – Feb 2025

- Managed cloud and data-product teams (25–30 engineers, incl. senior) across DevOps, developer-productivity tooling, and performance engineering for an FDA-regulated, HIPAA-relevant connected medical-device (diabetes care) platform.
- Owned end-to-end CI/CD (Jenkins, Python, Gradle) with gating; operated highly available Jenkins on EKS/EFS (99.9% uptime) and cut deployment errors 15%.
- Built a performance and load-testing framework (Locust, Python) on EKS/AWS (25% improvement); implemented SBOM generation and regulated change control (ECO/SBR/PCO) for data integrity and audit trails.

Amazon (AWS Redshift) — Lead Systems Engineer · Dec 2016 – Dec 2022

- Owned the build, CI/CD, release ecosystem, and test tooling for Redshift — one of AWS's largest-scale distributed data services — including the CI/CD servers and fully automated build/deploy across all AWS-supported regions.
- Led the team that designed and shipped a Bors-style automated merge queue, gating integration on the exact merge candidate (not just the feature branch) — eliminating broken-mainline incidents and unblocking developer velocity org-wide.
- Added metrics-driven reporting on pipeline health and developer productivity, making bottlenecks visible and driving continuous improvement across the developer workflow.

Prosper Marketplace (regulated fintech) — Lead DevOps Engineer · Jan 2015 – Dec 2016

- Rolled out org-wide CI/CD with Jenkins and containerization with Docker; managed Artifactory versioning and SonarQube static-analysis quality gates on AWS.

Pivotal Software — Member of Technical Staff · Sep 2011 – Jan 2015

- Managed CI infrastructure; automated Coverity static analysis and code-coverage; built dynamic provisioning of ephemeral Linux environments on AWS and vCloud.

OPEN SOURCE

UniClaw · github.com/uniclaw-labs/uniclaw

- Architected and shipped UniClaw, an open-source AI agent platform for connected vehicle control — a multi-provider framework supporting 27+ vehicle brands (Tesla, BMW, Ford, Rivian) via 12 messaging channels and voice assistants, built on Claude-powered agents, a FastAPI (Python) backend, and a Tauri desktop app in React and TypeScript.
- Designed a security-first architecture: an OAuth2 authorization server with scoped JWTs, rate limiting, Fernet-encrypted secrets, constant-time token validation, and non-root containers.
- Delivered production-grade quality across a polyglot codebase (Python, TypeScript, Rust): 4,400+ automated tests, pluggable provider/channel adapters, and Dockerized multi-service orchestration.

EDUCATION

- M.S., Software Engineering, San Jose State University (2011)
- B.E., Computer Engineering, Gujarat University (2009)

SKILLS & TOOLS

- **Platform & SRE:** Kubernetes/EKS at scale; Terraform (IaC); AWS, GCP, Azure; SLO-driven operations; incident management & on-call (PagerDuty); observability (Grafana LGTM / OpenObserve); 99.99% reliability; MTTR reduction; cost optimization
- **AI-Native Engineering:** AI-assisted development (Cursor, Claude Code, GitHub Copilot); MCP servers & GCP ADK agents for infrastructure automation; agent governance & guardrails; enterprise LLM rollout (Gemini Enterprise); AI-driven test generation
- **Developer Enablement & CI/CD:** GitHub Actions, Jenkins, Bazel (monorepo), Gradle; merge-queue & pipeline gating; self-service ephemeral environments; DORA metrics & PR throughput; SBOM
- **Leadership:** Hiring, coaching & growing engineers (incl. Senior/Staff); distributed teams; blameless retros & operational excellence; vendor strategy & TCO; cross-functional (Security, Product, Data); roadmaps & OKRs
- **Healthcare & Compliance:** FDA-regulated medical-device software (HIPAA-relevant); ISO/IEC 27001 & SOC 2; regulated change control & data integrity
- **Software & Data:** Python; TypeScript; Java/C/C#; Shell; API design; MySQL, PostgreSQL, Oracle, DynamoDB
