# Ishan Shah

San Carlos, CA • +1-925-596-8956 • ishan.hash@gmail.com

**Engineering Leader | Cloud Infrastructure, DevOps & Reliability Engineering | CI/CD, Security & Compliance at Scale**

## SUMMARY

Engineering leader with 15+ years running cloud infrastructure, DevOps, and platform teams for large-scale, regulated systems. Deep hands-on foundation across AWS, GCP, and Azure; Kubernetes; and Terraform — with CI/CD and secure, automated delivery pipelines, 99.99% reliability, observability, and SLOs. Own security and compliance end to end (ISO 27001, SOC 2 audit ownership) in regulated fintech and FDA-regulated environments, and operated build/CI for AWS Redshift at massive scale. Hire, coach, and grow distributed engineering teams; set technical and organizational vision; and partner cross-functionally on OKRs and roadmaps. Bring a modern automation edge — MCP servers, agents, and AI-assisted developer workflows — to make infrastructure and delivery faster and safer.

## EXPERIENCE

**CruxOCM Inc. — Head of Automation (reporting to the CTO) · Feb 2025 – Present**

- **Cloud infrastructure & platform services:** Standardized Kubernetes as the control plane across GCP and Azure with GitOps-style governance and built the web-services platform from scratch; 99.99% uptime; owned ~$2M cloud spend and drove >$200K in savings.
- **Observability & incident response:** Own platform observability on the Grafana LGTM stack (Loki/Grafana/Tempo/Mimir) and/or OpenObserve with PagerDuty — logs, metrics, traces, SLOs, and on-call/incident response.
- **CI/CD & automated, tested delivery:** Built CI/CD pipelines with automated testing and pipeline gating so changes ship automatically and thoroughly tested; a Robot Framework test platform (integration/E2E/regression) cut manual regression from days to <12 hours.
- **Security & compliance:** Spearheaded ISO 27001 and SOC 2 programs and obtained audit reports for both, partnering with security across a safety-critical, regulated environment.
- **DevOps automation & self-service infra:** Shipped Slack-native MCP servers and GCP ADK agents for self-service ephemeral infrastructure and automated cost governance — eliminating manual ops tickets and improving developer experience.
- **Modern AI/automation edge:** Standardized Cursor and Claude Code with automated PR review and shipped production agents on GCP ADK (a Gemini multi-agent troubleshooting assistant + a test-authoring agent) — applying AI to accelerate infrastructure and delivery work.
- **Team & vision:** Lead and grow a distributed technical org across platform, DevOps, infrastructure, security, quality, and AI — hiring, coaching, and developing engineers; set technical and organizational vision and partner with the CEO/CTO on roadmap and quarterly OKRs.

**Insulet Corporation (FDA-regulated medical devices) — Sr. Cloud Engineering Manager · Dec 2022 – Feb 2025**

- Managed cloud and data-product teams (25–30 engineers) across DevOps, developer-productivity tooling, and performance engineering — hiring, coaching, and growing the team.
- Owned end-to-end CI/CD (branching to one-button deploy) with Jenkins, Python, and Gradle; operated highly available Jenkins on EKS/EFS (99.9% uptime) and reduced deployment errors 15%.
- Implemented SBOM generation and merge automation across ~25 microservices in CI/CD, supporting security and regulatory requirements.
- Built a performance and load-testing framework (Locust, Python) on EKS/AWS driving a 25% improvement in cloud architecture performance.

**Amazon (AWS Redshift) — Lead Systems Engineer · Dec 2016 – Dec 2022**

- Owned the build, CI/CD, release ecosystem, and test tooling for Redshift — one of AWS's largest-scale distributed data services — including the CI/CD servers and fully automated build/deploy across all AWS-supported regions.
- Led the team that designed and shipped a Bors-style automated merge queue, gating integration on the exact merge candidate (not just the feature branch) — eliminating broken-mainline incidents and unblocking developer velocity org-wide.

- Added metrics-driven reporting on pipeline health and developer productivity, making bottlenecks visible and driving continuous improvement across the developer workflow.

**Prosper Marketplace (regulated fintech) — Lead DevOps Engineer · Jan 2015 – Dec 2016**

- In a regulated fintech environment, rolled out org-wide CI/CD with Jenkins and containerization with Docker; managed Artifactory for microservice versioning and SonarQube for static-analysis security scanning; ran a Hadoop cluster on AWS (EMR).

**Pivotal Software — Member of Technical Staff · Sep 2011 – Jan 2015**

- Managed CI infrastructure and agents; migrated Perforce to Git; automated Coverity static analysis and code-coverage; built dynamic provisioning of Linux development/test environments on AWS and vCloud.

## OPEN SOURCE

**UniClaw · github.com/uniclaw-labs/uniclaw**

- Architected and shipped UniClaw, an open-source AI agent platform for connected vehicle control — a multi-provider framework supporting 27+ vehicle brands (Tesla, BMW, Ford, Rivian) with natural language commands via 12 messaging channels (WhatsApp, Telegram, Slack) and voice assistants (Alexa, Google Home), built on Claude-powered agents, FastAPI, and a Tauri/React desktop app.
- Designed a security-first architecture for sensitive vehicle credentials: an OAuth2 authorization server with scoped JWTs, automatic Fernet encryption of secrets, constant-time token validation, and non-root containers — patterns transferable to SOC 2 / ISO 27001 environments.
- Delivered production-grade quality across a polyglot codebase (Python, TypeScript, Rust): 4,400+ automated tests, pluggable provider/channel adapters, Dockerized multi-service orchestration, and three AI backends (Anthropic API, local Ollama, zero-cost command mode).

## EDUCATION

- M.S., Software Engineering, San Jose State University (2011)
- B.E., Computer Engineering, Gujarat University (2009)

## SKILLS & TOOLS

- **Cloud Infrastructure & DevOps:** AWS, GCP, Azure; Kubernetes (GKE, EKS, AKS); Terraform; Docker; GitOps; CI/CD & release engineering (GitHub Actions, Jenkins, Bazel, Gradle); self-service ephemeral infrastructure; observability (Grafana LGTM / OpenObserve, PagerDuty), SLOs & reliability (99.99%)
- **Quality, Security & Compliance:** Secure CI/CD & SBOM; static-analysis scanning (SonarQube, Coverity); test automation & pipeline gating (Robot Framework, Python); performance engineering (Locust); ISO/IEC 27001 & SOC 2 (audit ownership); security partnering; regulated fintech & FDA-regulated environments
- **AI & Automation:** AI-assisted development (Cursor, Claude Code, GitHub Copilot); MCP servers & agents (GCP ADK) for self-service infrastructure & DevOps automation; enterprise LLM rollout (Gemini Enterprise)
- **Leadership:** Hiring, coaching & developing engineers; leading distributed teams (4–30 engineers); technical & organizational vision; cross-functional stakeholder management; roadmaps & quarterly OKRs
- **Software & Data:** Python; Java/C/C#; Shell; API design; large-scale distributed data services; MySQL, PostgreSQL, Oracle, DynamoDB
