Engineering Leader | Compute Platforms, Cloud & Dev Infrastructure at Scale | Generative-AI Adoption, Observability & Operational Excellence

SUMMARY

Engineering leader with 15+ years designing, building, and operating complex infrastructure and compute platforms across AWS, GCP, and Azure — from one of AWS's largest-scale distributed data services to hybrid cloud platforms run at 99.99%. Own development infrastructure end to end (CI/CD, artifact management, release governance) and deep observability (metrics, logs, traces, alerting) with SLOs and blameless incident resolution. Led the enterprise evaluation and adoption of generative AI tools across engineering and business workflows — an org-wide Gemini Enterprise rollout and standardized Cursor/Claude Code with automated PR review — governing the operational, security, and cost considerations of AI adoption. Drive performance optimization, capacity planning, and infrastructure standards; partner with the C-suite (including security leadership) on strategy, budgets, and OKRs; and build, mentor, and retain high-performing engineering teams in demanding environments.

EXPERIENCE

CruxOCM Inc. — VP of Engineering / Head of Automation (reporting to the CTO) · Feb 2025 – Present

- **Compute-platform strategy & org:** Set and own compute-platform strategy across GCP and Azure (plus hybrid cloud) for an industrial automation platform in safety-critical, regulated energy environments; lead a distributed org spanning platform, infrastructure, DevOps, AI, security, and quality; partner with the CEO, CTO, and security leadership on roadmap, budgets, and OKRs.
- **Generative-AI evaluation & enterprise adoption:** Led the evaluation and org-wide adoption of generative AI tools across engineering and business workflows — a Gemini Enterprise rollout integrated with the full application suite, standardized Cursor/Claude Code + GitHub Copilot PR review, and light build-vs-buy analysis — governing operational, security, and cost considerations; also shipped production AI agents (GCP ADK) and MCP servers for AI-powered infrastructure automation.
- **Development infrastructure (CI/CD & artifact management):** Own dev infrastructure end to end — CI/CD across GitHub Actions, Jenkins, Bazel (monorepo), and Gradle with pipeline gating, artifact management, release governance, and self-service ephemeral environments; establish infrastructure standards and best practices across teams.
- **Observability & operational excellence:** Run deep observability (Grafana LGTM — metrics, logs, traces — / OpenObserve with PagerDuty alerting), SLOs, and blameless incident resolution and remediation at 99.99% uptime; drive performance optimization and capacity planning; own ~$2M cloud spend with >$200K saved through right-sizing and ephemeral infrastructure.
- **Security, compliance & metrics:** SBOM and static-analysis security scanning; ISO 27001 and SOC 2 (audit ownership); DORA and pipeline-health metrics with dashboards from engineer to executive review.
- **Team leadership & mentorship:** Hire, mentor, and grow high-performing engineers and leads; raise the technical bar through standards, code review, coaching, and continuous improvement.

Insulet Corporation (FDA-regulated medical devices) — Sr. Cloud Engineering Manager · Dec 2022 – Feb 2025

- Led cloud and data-product teams (25–30 engineers) across platform, DevOps, developer productivity, and performance engineering; partnered with the VP of Engineering on multi-year roadmaps and quarterly OKRs.
- Built a performance and load-testing framework (Locust, Python) on EKS/AWS that improved cloud architecture performance 25%; operated highly available Jenkins on EKS/EFS (99.9% uptime) and cut deployment errors 15%.
- Owned end-to-end CI/CD with gating and one-button deploy (Jenkins, Python, Gradle); implemented SBOM generation and regulated change control for data integrity and supply-chain security.

Amazon (AWS Redshift) — Lead Systems Engineer · Dec 2016 – Dec 2022

- Owned the build, CI/CD, release ecosystem, and test tooling for Redshift — one of AWS's largest-scale distributed data services — including the CI/CD servers and fully automated build/deploy across all AWS-supported regions.
- Led the team that designed and shipped a Bors-style automated merge queue, gating integration on the exact merge candidate (not just the feature branch) — eliminating broken-mainline incidents and unblocking developer velocity org-

wide.
- Added metrics-driven reporting on pipeline health and developer productivity, making bottlenecks visible and driving continuous improvement across the developer workflow.

Prosper Marketplace (regulated fintech) — Lead DevOps Engineer · Jan 2015 – Dec 2016

- Rolled out org-wide CI/CD with Jenkins and containerization with Docker; managed Artifactory artifact/versioning, SonarQube quality gates, and a Hadoop cluster on AWS (EMR) for large-scale data processing.

Pivotal Software — Member of Technical Staff · Sep 2011 – Jan 2015

- Managed CI infrastructure and agents; migrated Perforce to Git with enforced branching/merge policy; automated Coverity static analysis and code-coverage; built dynamic provisioning of Linux environments across AWS and on-prem vCloud.

OPEN SOURCE

UniClaw · github.com/uniclaw-labs/uniclaw

- Architected and shipped UniClaw, an open-source AI agent platform — a multi-provider framework built on Claude-powered agents, a FastAPI (Python) backend, and a Tauri desktop app in React and TypeScript, with a security-first design (OAuth2 with scoped JWTs, rate limiting, Fernet-encrypted secrets, non-root containers) and 4,400+ automated tests across a polyglot codebase (Python, TypeScript, Rust). Also publish an open-source Lever MCP server.

EDUCATION

- M.S., Software Engineering, San Jose State University (2011)
- B.E., Computer Engineering, Gujarat University (2009)

SKILLS & TOOLS

- **Compute Platforms & Cloud:** AWS, GCP, Azure; hybrid cloud; Kubernetes (EKS, GKE, AKS); Terraform; Docker; large-scale distributed systems; capacity planning & cost efficiency (FinOps)
- **Development Infrastructure:** CI/CD (GitHub Actions, Jenkins, Bazel monorepo, Gradle); artifact management (Artifactory); merge-queue & release governance; Linux
- **Observability & Operations:** Grafana LGTM (metrics/logs/traces) / OpenObserve + PagerDuty; SLOs; incident resolution & blameless RCA; 99.99% reliability; performance optimization
- **Generative AI & Enablement:** Enterprise AI adoption (Gemini Enterprise); AI-assisted development (Cursor, Claude Code, GitHub Copilot); AI agents (GCP ADK) & MCP servers; MLOps/LLMOps; operational/security/cost governance of AI
- **Security & Compliance:** SBOM & static-analysis scanning; ISO 27001 / SOC 2 (audit ownership); regulated-industry change control
- **Leadership:** Building & mentoring high-performing teams; infrastructure standards & best practices; roadmaps & OKRs; ~$2–3M budget & vendor management; C-suite & executive stakeholder partnership
- **Software & Data:** Python; Java/C/C#; Bash; SQL/NoSQL (MySQL, PostgreSQL, Oracle, DynamoDB); API design
