Engineering Leader | Developer Platforms, APIs & Developer Experience | Integration Quality, Reliability & Team Building — Payments & Regulated

SUMMARY

Engineering leader with 15+ years building developer platforms and the APIs, integrations, and tooling that make them easy to build on. I lead high-performing engineering teams, set quality and best-practice standards for scalability, performance, and reliability, and champion developer experience — usability, consistency, and efficiency across APIs, integrations, and internal tools — backed by strong observability and monitoring. I've delivered in regulated, high-stakes domains including fintech payments (Prosper) and one of AWS's largest distributed data services (Redshift), and I build in the open — an open-source AI agent platform with a 27+ integration provider registry and a published open-source MCP server. I mentor and grow engineers and leads, partner across product and community, and stay hands-on in Python and Java.

EXPERIENCE

CruxOCM Inc. — VP of Engineering / Head of Automation (reporting to the CTO) · Feb 2025 – Present

- **Team leadership & mentorship:** Lead a distributed engineering organization spanning platform, developer experience, infrastructure, DevOps, security, and quality; hire, mentor, and grow engineers and leads, set the technical bar, and partner with the CEO/CTO and cross-functionally on roadmap and OKRs.
- **Developer platform & experience:** Built an internal developer platform with self-service, "paved-road" workflows and common principles that streamline how teams build, integrate, and ship — improving developer efficiency and consistency, measured as DORA metrics with dashboards from engineer to executive.
- **APIs & integrations:** Own API design and reusable integration surfaces — MCP servers as action surfaces (a published open-source Lever MCP server + Slack-native) — and, in open source, architected UniClaw's pluggable provider/tool registry spanning 27+ integrations with per-request auth, driving API consistency and integration simplicity.
- **Quality, reliability & monitoring:** Set quality and best-practice standards for scalability and performance; run observability and monitoring (Grafana LGTM — metrics, logs, traces — / OpenObserve, PagerDuty) with SLOs and blameless incident/RCA at 99.99% uptime.
- **AI-driven developer productivity:** Standardized Cursor/Claude Code + GitHub Copilot for automated PR review and shipped production AI agents (GCP ADK) that reduce toil across the developer workflow.
- **Security & compliance:** Spearheaded ISO 27001 and SOC 2 programs (audit ownership) with static-analysis scanning and encrypted secrets for a regulated, safety-critical platform.

Insulet Corporation (FDA-regulated medical devices) — Sr. Cloud Engineering Manager · Dec 2022 – Feb 2025

- Led cloud and data-product teams (25–30 engineers) across DevOps, developer productivity, and performance engineering; partnered with the VP of Engineering on multi-year roadmaps and quarterly OKRs.
- Built a performance and load-testing framework (Locust, Python) on EKS/AWS (25% improvement); operated highly available Jenkins on EKS/EFS (99.9% uptime) and cut deployment errors 15%.
- Owned end-to-end CI/CD with gating and one-button deploy (Jenkins, Python, Gradle); implemented SBOM generation and regulated change control for data integrity and supply-chain security.

Amazon (AWS Redshift) — Lead Systems Engineer · Dec 2016 – Dec 2022

- Owned the build, CI/CD, release ecosystem, and test tooling for Redshift — one of AWS's largest-scale distributed data services — including the CI/CD servers and fully automated build/deploy across all AWS-supported regions.
- Led the team that designed and shipped a Bors-style automated merge queue, gating integration on the exact merge candidate (not just the feature branch) — eliminating broken-mainline incidents and unblocking developer velocity org-wide.
- Added metrics-driven reporting on pipeline health and developer productivity, making bottlenecks visible and driving continuous improvement across the developer workflow.

Prosper Marketplace (regulated fintech / payments) — Lead DevOps Engineer · Jan 2015 – Dec 2016

- Rolled out org-wide CI/CD with Jenkins and containerization with Docker for a regulated consumer-lending platform; managed Artifactory artifact/versioning, SonarQube static-analysis quality gates, and a Hadoop cluster on AWS (EMR).

Pivotal Software — Member of Technical Staff · Sep 2011 – Jan 2015

- Managed CI infrastructure and agents; migrated Perforce to Git with enforced branching/merge policy; automated Coverity static analysis and code-coverage; built dynamic provisioning of Linux environments on AWS and vCloud.

OPEN SOURCE

UniClaw · github.com/uniclaw-labs/uniclaw

- Architected and shipped UniClaw, an open-source AI agent platform — Claude-powered agents on a FastAPI (Python) backend and a React / TypeScript app, with a pluggable provider/tool registry (27+ integrations), per-request auth, and a security-first design (OAuth2 authorization server with scoped JWTs, rate limiting, Fernet-encrypted secrets, non-root containers); 4,400+ automated tests across a polyglot codebase (Python, TypeScript, Rust). Also publish an open-source Lever MCP server.

EDUCATION

- M.S., Software Engineering, San Jose State University (2011)
- B.E., Computer Engineering, Gujarat University (2009)

SKILLS & TOOLS

- **Developer Platform & Experience:** Internal developer platforms & self-service ("paved roads"); developer productivity & DORA metrics; common principles / standardization; integration simplicity & consistency
- **APIs & Integrations:** API design; reusable integration surfaces (MCP servers, provider/tool registries); OAuth2 / scoped JWTs; REST; webhooks & event-driven integration; open-source integration frameworks (UniClaw, 27+ integrations)
- **Quality, Reliability & Monitoring:** Best practices for scalability & performance; observability/monitoring (Grafana LGTM / OpenObserve, PagerDuty); SLOs; incident management & RCA; 99.99% reliability; performance engineering (Locust)
- **Platform & Cloud:** AWS, GCP, Azure; Kubernetes (EKS/GKE/AKS); Terraform; Docker; GitOps; CI/CD (GitHub Actions, Jenkins, Bazel monorepo, Gradle)
- **AI Engineering:** AI agents (GCP ADK) & MCP servers; RAG / retrieval (Vertex AI); enterprise AI rollout (Gemini Enterprise); AI-assisted development (Cursor, Claude Code, GitHub Copilot)
- **Leadership & Community:** Building & mentoring high-performing teams; standards & architecture review; roadmaps & OKRs; ~$2–3M budget & vendor management; open-source contribution & community engagement
- **Languages & Data:** Python; Java; React / TypeScript; Bash; C/C#; SQL/NoSQL (MySQL, PostgreSQL, Oracle, DynamoDB)
