Engineering Leader | DevOps, Cloud Infrastructure & Platform Leadership | CI/CD Automation, Observability & SLAs, Cost & Security (SOC 2)

SUMMARY

Engineering leader with 15+ years owning DevOps and cloud infrastructure and building the organizations that run them. I lead the infrastructure and DevOps domain end to end — cloud infrastructure management, continuous integration, and automation, deployment, and maintenance across AWS, GCP, and Azure with Terraform infrastructure-as-code. I bring production observability and reliability to the next level with SLOs and an SLA strategy at 99.99% uptime, and I act as custodian of cloud environments — guarding and optimizing costs (>$200K saved on ~$2M spend), securing the perimeter and assets, and keeping the organization compliant with SOC 2 and ISO 27001 with minimal friction to development velocity. I hire, mentor, and build high-performing teams, partner with the C-suite, and stay hands-on where it counts.

EXPERIENCE

CruxOCM Inc. — VP of Engineering / Head of Automation (reporting to the CTO) · Feb 2025 – Present

- **DevOps & infrastructure domain leadership:** Lead the DevOps and infrastructure domain across platform, security, and quality; build the function by hiring, mentoring, and growing engineers and leads; partner with the CEO/CTO and cross-functionally with strong communication and collaboration.
- **Cloud infrastructure & Terraform IaC:** Own cloud infrastructure management across GCP and Azure (plus AWS) — automation, deployment, and maintenance — standardizing Kubernetes as the control plane with Terraform infrastructure-as-code, GitOps governance, and self-service ephemeral environments.
- **Continuous integration & automation:** Own CI/CD across GitHub Actions, Jenkins, Bazel (monorepo), and Gradle with pipeline gating and release governance; built automation frameworks that eliminated manual ops toil across the delivery lifecycle.
- **Observability, reliability & SLAs:** Brought production observability and reliability to the next level — Grafana LGTM (metrics, logs, traces) / OpenObserve with PagerDuty, SLOs and SLA targets, and blameless incident response and RCA at 99.99% uptime.
- **Cost, security & SOC 2 compliance:** Custodian of the cloud environments — guarded and optimized costs (>$200K saved on ~$2M spend via right-sizing and ephemeral infrastructure), secured the perimeter and assets (access control, encrypted secrets, static-analysis scanning, SBOM), and drove ISO 27001 and SOC 2 (audit ownership) with minimal friction to development velocity.
- **AI-driven automation:** Built automation that reduced toil — production AI agents (GCP ADK) and MCP servers, plus standardized Cursor/Claude Code + GitHub Copilot for automated PR review.

Insulet Corporation (FDA-regulated medical devices) — Sr. Cloud Engineering Manager · Dec 2022 – Feb 2025

- Led cloud and data-product teams (25–30 engineers) across DevOps, developer productivity, and performance engineering; partnered with the VP of Engineering on multi-year roadmaps and quarterly OKRs.
- Owned end-to-end CI/CD with gating and one-button deploy (Jenkins, Python, Gradle); operated highly available Jenkins on EKS/EFS (99.9% uptime) and cut deployment errors 15%.
- Built a performance and load-testing framework (Locust, Python) on EKS/AWS (25% improvement); implemented SBOM generation and regulated change control for data integrity and supply-chain security.

Amazon (AWS Redshift) — Lead Systems Engineer · Dec 2016 – Dec 2022

- Owned the build, CI/CD, release ecosystem, and test tooling for Redshift — one of AWS's largest-scale distributed data services — including the CI/CD servers and fully automated build/deploy across all AWS-supported regions.
- Led the team that designed and shipped a Bors-style automated merge queue, gating integration on the exact merge candidate (not just the feature branch) — eliminating broken-mainline incidents and unblocking developer velocity org-wide.
- Added metrics-driven reporting on pipeline health and developer productivity, making bottlenecks visible and driving continuous improvement across the developer workflow.

Prosper Marketplace (regulated fintech) — Lead DevOps Engineer · Jan 2015 – Dec 2016

- Rolled out org-wide CI/CD with Jenkins and containerization with Docker; managed Artifactory artifact/versioning, SonarQube static-analysis quality gates, and a Hadoop cluster on AWS (EMR).

Pivotal Software — Member of Technical Staff · Sep 2011 – Jan 2015

- Managed CI infrastructure and agents; migrated Perforce to Git with enforced branching/merge policy; automated Coverity static analysis and code-coverage; built dynamic provisioning of Linux environments on AWS and vCloud.

OPEN SOURCE

UniClaw · github.com/uniclaw-labs/uniclaw

- Architected and shipped UniClaw, an open-source AI agent platform — a multi-provider framework on a FastAPI (Python) backend and a React / TypeScript app, with a security-first design (OAuth2 authorization server with scoped JWTs, rate limiting, Fernet-encrypted secrets, non-root containers) and 4,400+ automated tests across a polyglot codebase (Python, TypeScript, Rust) with Dockerized orchestration. Also publish an open-source Lever MCP server.

EDUCATION

- M.S., Software Engineering, San Jose State University (2011)
- B.E., Computer Engineering, Gujarat University (2009)

SKILLS & TOOLS

- **DevOps & Cloud Infrastructure:** Cloud infrastructure management (AWS, GCP, Azure); Kubernetes (EKS, GKE, AKS); Terraform (IaC); Docker; GitOps; automation, deployment & maintenance; self-service ephemeral environments
- **CI/CD & Automation:** GitHub Actions, Jenkins, Bazel (monorepo), Gradle; continuous integration; merge-queue & release governance; automation frameworks
- **Observability, Reliability & SLAs:** Grafana LGTM / OpenObserve + PagerDuty; SLOs & SLA strategy; incident response & blameless RCA; 99.99% reliability; DORA metrics
- **Cost & Security:** Cloud cost optimization & guardrails (FinOps); perimeter & asset security; access control; encrypted secrets; SBOM & static-analysis scanning; ISO 27001 / SOC 2 (audit ownership)
- **AI & Automation:** AI agents (GCP ADK) & MCP servers; enterprise AI rollout (Gemini Enterprise); AI-assisted development (Cursor, Claude Code, GitHub Copilot)
- **Leadership:** Building & mentoring infrastructure/DevOps teams; C-suite & cross-functional partnership; roadmaps & OKRs; ~$2–3M budget & vendor management
- **Languages & Data:** Python; Java/C/C#; Bash; SQL/NoSQL (MySQL, PostgreSQL, Oracle, DynamoDB); API design
